

<member>
 <obj.ref.var>.<member>
 <class-name>.<member>
 <this/super>.<member>

- a class-name creates class context.
- an obj.ref.variable creates instance context.
- a static method creates class context
- an instance level method creates instance context
- this/super creates instance context

instance context

class context

	instance member	static (class-level) member
instance context	✓	✓
class context	✗	✓

```

class A {
  int x = 2;
  static float y = 2.3f;
  void pro() {
    S.op(x); ✓
    S.op(y); ✓
    S.op(A.x); ✗
    S.op(A.y); ✓
  }
}
  
```

A.x
A.y

instance level members

class level members

```

p.s.v. main(String[] args) {
  A t = new A();
  S.op(x); ✗
  S.op(y); ✓
  S.op(A.x); ✗
  S.op(A.y); ✓
  S.op(t.x); ✓
  S.op(t.y); ✓
  pro(); ✗
  A.pro(); ✗
  t.pro(); ✓
}
  
```

A.pro()

}
